

Thermo-Tech Inc

Preparation for Breast and Full Body Thermography

1. Avoid ingesting caffeine especially coffee for 2 hours before screening as it can diminish the vascular-like features that are needed for a comprehensive report.
2. Avoid antiperspirant the day of the screening as it suppresses the lymphatic system. Other more natural deodorants are okay.
3. Avoid hormone cream in the screening site as it will alter the screening in the location of the screening sight meaning completely on Full Body.
4. Avoid electronic equipment or anti-electronic equipment or jewelry on your body for two hours before screening.
5. Avoid extreme exercise like running or saunas for three hours before screening as it will elevate your temperature.
6. Avoid getting acupuncture or deep body work for 5 days prior to screening in the area being screened as it will appear as a burse or inflamed area giving a false positive. So for the breast anywhere on the upper body and for the full body avoid entirely as images used in full body screening from head to toe and front to back.
7. Do not get sunburned.
8. Do not have a new tattoo in the area being screened.
9. Wait for two weeks after a mammogram or other forms of radiation like MRC or CT until bruising if any is gone as both as this disrupts the reading.
10. Wait for four to six month after a surgical procedure on the site of the screening or until there is no more bruising or tenderness.
